

# MISSISSIPPI Corn for Grain

---

## HYBRID TRIALS, 2009

---

MISSISSIPPI AGRICULTURAL & FORESTRY EXPERIMENT STATION • MELISSA J. MIXON, INTERIM DIRECTOR

MISSISSIPPI STATE UNIVERSITY • MARK E. KEENUM, PRESIDENT • GREGORY A. BOHACH, VICE PRESIDENT

## **NOTICE TO USER**

This Mississippi Agricultural and Forestry Experiment Station information bulletin is a summary of research conducted under project number MIS 1414 at locations shown on the map on the second page. It is intended for colleagues, cooperators, and sponsors. The interpretation of data presented in this report may change after additional experimentation. Information included is not to be construed as a recommendation for use or as an endorsement of a specific product by Mississippi State University or the Mississippi Agricultural and Forestry Experiment Station.

This report contains data generated as part of the Mississippi Agricultural and Forestry Experiment Station research program. Joint sponsorship by the organizations listed on pages 3-4 is gratefully acknowledged.

Trade names of commercial products used in this report are included only for clarity and understanding. All available names (i.e., trade names, chemical names, etc.) of products used in this research project are listed on pages 3-4.

**The Mississippi Corn Promotion Board provided funds  
for publishing these hybrid trial results.**

For more information, contact Brad Burgess at (662) 325-7784; email, [Bburgess@pss.msstate.edu](mailto:Bburgess@pss.msstate.edu). Recognition is given to Jerry W. Nail, and Loyd B. Cooper, research technicians for the Variety Testing Program, for their assistance in packaging, planting, harvesting, and recording plot data. Statistical analyses and computing assistance were provided by Dr. Dennis Rowe, Experimental Statistics. This publication was prepared by Jimmie Cooper, office associate for MAFES Research Support Units. It was published by the Office of Agricultural Communications, a unit of the Mississippi State University Division of Agriculture, Forestry, and Veterinary Medicine. **Corn Hybrids Variety  
TEST LOCATIONS**

# Mississippi Corn for Grain Hybrid Trials, 2009

## PROCEDURE

Trials were conducted on Experiment Station land or on grower-cooperator fields in two geographical areas in Mississippi: Area I, located in the hill region of Mississippi (five dryland locations); and Area II, located in the Delta region of Mississippi (three irrigated locations) (see map). Commercial seed companies were given the opportunity to enter hybrids in either Area I or Area II or both.

Plots consisted of two 30-inch rows, 15 feet long. Weeds were controlled by cultivation and/or herbicides. Only herbicides currently registered for use on corn were used in these studies, with strict adherence to all label instructions.

All hybrids were treated with Poncho or Cruiser for seedling insect control. Experimental design was a randomized complete block with four replications at each location.

Seed of all entries were supplied by participating companies. All seed were packaged for planting at seeding rates suggested by the participating company and planted with a cone planter. Fertilizer was applied according to soil test recommendations. Plots in Area I were grown in dryland conditions, and plots in Area II were furrow irrigated, as necessary.

## VARIABLES MEASURED IN THE CORN HYBRID TESTS

**Yield:** An Almaco SPC 40 plot combine was used to harvest the total area of each plot. Harvested grain was weighed, moisture was determined, and yields were converted to bushels per acre at 15.5% moisture.

**Ear Height:** Ear height is the distance from the soil to the highest ear-bearing node.

**Harvest Population:** Harvest population is a measure of the number of plants per acre, based on actual stand counts.

## USE OF DATA TABLES AND SUMMARY STATISTICS

The yield potential of a given hybrid cannot be measured with complete accuracy. Consequently, replicate plots of all hybrids are evaluated for yield, and the yield of a given hybrid is estimated as the mean of all replicate plots of that hybrid. Yields vary somewhat from one replicate plot to another, which introduces a certain degree of error to the value. As a result, although the mean yields of some hybrids are numerically different, the two hybrids may not be significantly different from each other within the range of natural variation. That is, the ability to measure yield is not precise enough to determine what the small differences are, other than what might be observed purely by chance.

The least significant difference (LSD) is an estimate of the smallest difference between two hybrids that can be declared to be the result of something other than random variation in a particular trial. Consider the following example for a given trial:

Hybrid	Yield
A .....	90 bu/A
B .....	85 bu/A
C .....	81 bu/A
LSD .....	7 bu/A

The difference between hybrid A and hybrid B is 5 bu/A (i.e.,  $90 - 85 = 5$ ). This difference is smaller than the LSD (7 bu/A). Consequently, we would conclude

that hybrid A and hybrid B have the same yield potential, since we are unable to say that the observed difference did not occur purely due to chance. However, the difference between hybrid A and hybrid C is 9 bu/A (i.e.,  $90 - 81 = 9$ ), which is larger than the LSD (7 bu/A). We would therefore conclude that the yield potential of hybrid A is superior to that of hybrid C.

The coefficient of variation (CV) is a measure of the relative precision of a given trial and is used to compare the relative precision of different trials. The CV is generally considered an estimate of the amount of unexplained variation in a given trial. This unexplained variation can be the result of variation between plots with respect to soil type, fertility, insects, diseases, moisture stress, etc. Overall, as the CV increases, the precision of a given trial decreases.

The coefficient of determination ( $R^2$ ) is another measure of the level of precision in a trial and is also used to compare the relative precision of different trials. The  $R^2$  is a measure of the amount of variation that is explained, or accounted for, in a given trial. For example, an  $R^2$  value of 90 percent indicates that 90 percent of the observed variation in the trial has been accounted for in the trial, with the remaining 10 percent being unaccounted for. The higher the  $R^2$  value, the more precise the trial. The  $R^2$  is generally considered a better measure of precision than the CV for comparison of different trials.

# CLIFTON FARMS, HERNANDO

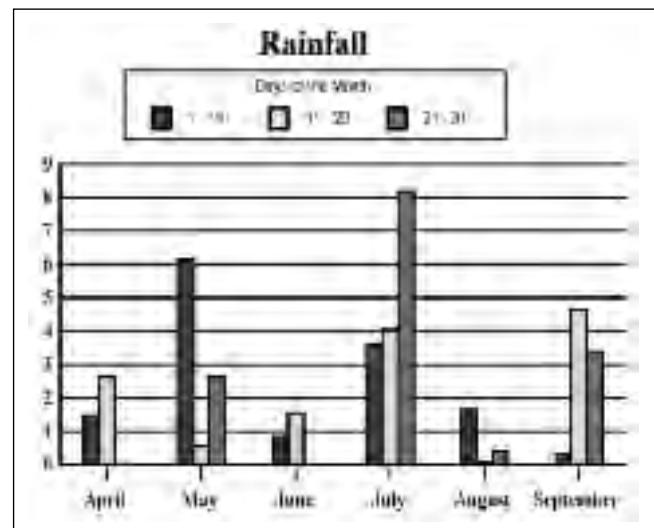

## Crop Summary

A very wet spring delayed planting, and then an extremely wet May reduced plant populations, stunted roots, and slowed corn development. Weather conditions were dry and hot during pollination, and then rain returned during latter grain filling stages. Harvest was delayed by weather in September.

Soil type .....	.Collins silt loam
Soil pH .....	5.9
Soil fertility .....	P=H; K=H
Fertilizer added .....	N @ 175 lb/A
Herbicide application .....	Burndown — Touchdown Total @ 26 oz/A + 2,4D @ 1.5 pt/A Preemergence — Dual II Magnum @ 1 pt/A, Atrazine @ 1 qt/A, Callisto @ 3 oz/A, and Roundup Powermax @ 22 oz/A on April 24 Layby — Atrazine @ 8 oz/A and Callisto @ 3 oz/A on June 10
Previous crop .....	Soybeans
Planting date .....	April 24
Harvest date .....	September 29

<sup>1</sup>Planted April 24; harvested September 29.

# MAFES BLACK BELT BRANCH, BROOKSVILLE

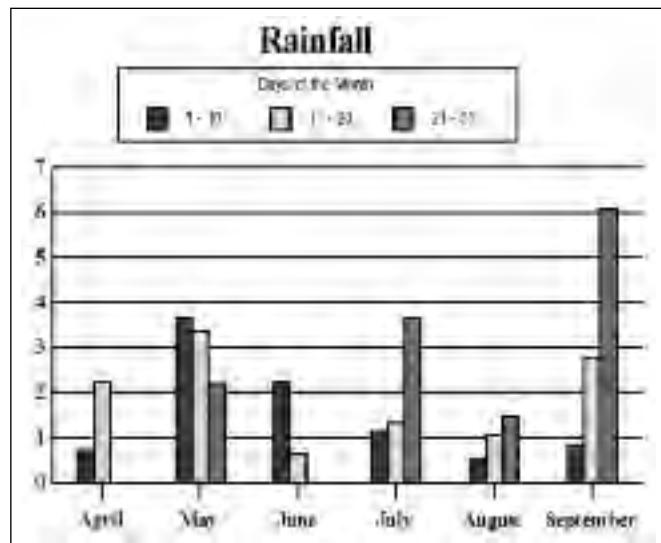

## Crop Summary

This location was planted into a well-prepared seedbed with adequate moisture. Plots emerged quickly to a suitable stand. An extremely wet month of May, followed by drought stress during June, reduced plant growth and development considerably. All plots were harvested in a timely manner, avoiding the late-September rains.

Soil type .....	.Brooksville silty clay
Soil pH .....	6.7
Soil fertility .....	.P=M, K=M
Fertilizer added .....	.Preplant — 13-13-13 @ 300 lb/A Sidedress — N @ 200 lb/A
Herbicide application .....	.Preemergence — Dual II Magnum @ 1 pt/A, Atrazine @ 1.5 qt/A, Callisto @ 3 oz/A, and Roundup Powermax @ 22 oz/A on April 9 Layby — Atrazine @ 8 oz/A and Callisto @ 3 oz/A on May 22
Previous crop .....	.Soybeans

<sup>1</sup>Planted April 9; harvested September 8.

# CHRIS AUSBORN FARM, ABERDEEN

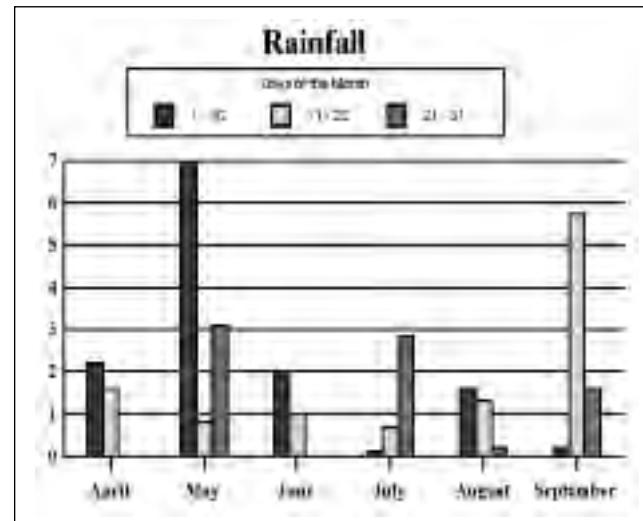

## Crop Summary

This location was planted at an optimum planting date and was able to establish an acceptable stand before heavy May rainfall. A drought period between late June and early July did reduce yields slightly. Significant rainfall during the month of September delayed harvest, but all plots were harvested without any problems.

Soil type .....	Houston clay
Soil pH .....	7.1
Soil fertility .....	P=M; K=H
Fertilizer added .....	Preplant — Poultry litter @ 1.5 T/A Sidedress — N @ 175 lb/A
Herbicide application .....	Preemergence — Dual II Magnum @ 1 pt/A, Atrazine @ 1 qt/A, Callisto @ 3 oz/A, and Roundup Powermax @ 22 oz/A on April 9 Postemergence — Atrazine @ 2 qt/A and Accent @ 0.5 oz/A on May 28
Previous crop .....	Soybeans
Planting date .....	April 9
Harvest date .....	September 30

<sup>1</sup>Planted April 9; harvested September 30.

# HENRY SHETLER FARM, CLARKSDALE

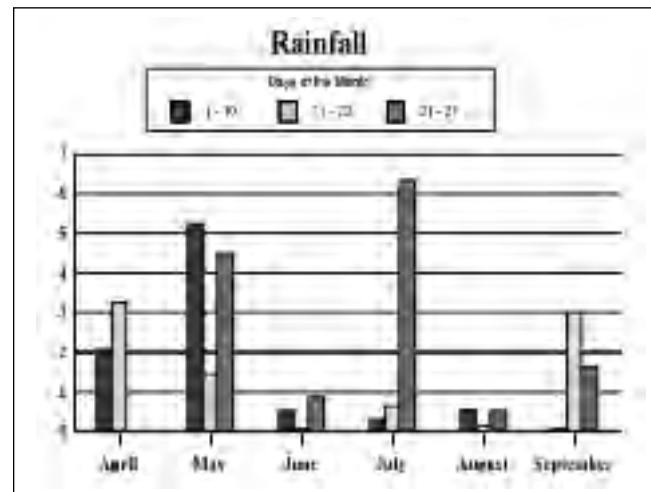

## Crop Summary

Plots were planted into a stale seedbed following corn. Planting was delayed slightly due to early-spring rains. Conditions were favorable at planting, and the corn emerged to a good stand. Heavy rains in May stunted plant growth; however, timely summer rain and irrigation allowed for good yields.

Soil type .....	Forestdale silt loam
Soil pH .....	6.0
Soil fertility .....	P=H; K=H
Fertilizer added .....	Preplant — Poultry litter @ 2 T/A Sidedress — N @ 248 lb/A
Herbicide application ....	Preemergence — Dual II Magnum @ 1 pt/A, Atrazine @ 1 qt/A, Callisto @ 3 oz/A, and Roundup Powermax @ 22 oz/A on April 24
	Layby — Atrazine @ 8 oz/A and Callisto @ 3 oz/A on June 4

# ROB COKER FARM, YAZOO CITY

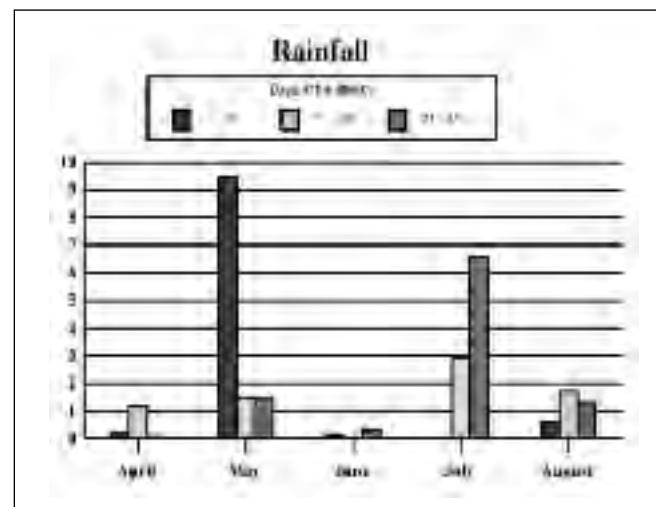

## Crop Summary

Corn was planted into a stale seedbed with conditions optimum for germination, resulting in good stands. Extremely wet weather conditions during May reduced plant growth. Timely irrigations throughout the growing season resulted in good yields. Harvest was completed in a timely manner without any problems.

Soil type .....	Dundee silt loam
Soil pH .....	5.8
Soil fertility .....	P=M; K=H
Fertilizer added .....	N @ 230 lb/A + P <sub>2</sub> O <sub>5</sub> @ 67 lb/A
Herbicide application .....	Preemergence — Bicep II Magnum @ 2 qt/A
Previous crop .....	Corn
Irrigation (Furrow) .....	June 8, June 16, June 22, July 1, July 7, and July 14
Planting date .....	April 10
Harvest date .....	August 26

# MAFES DELTA BRANCH, STONEVILLE

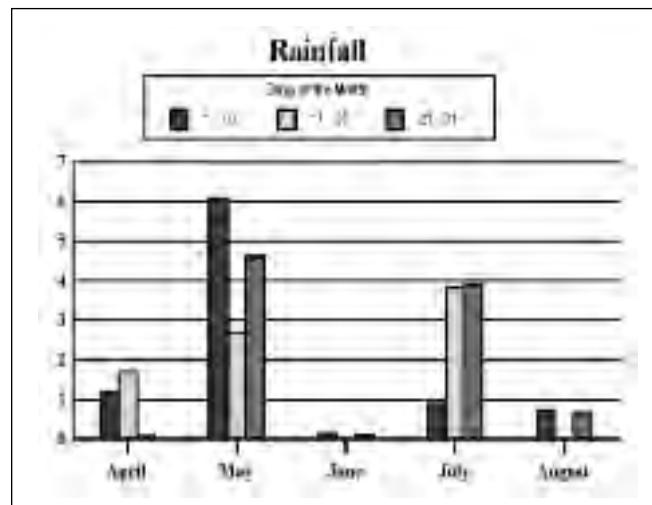

## Crop Summary

The crop was planted on March 23 but did not get an adequate stand. Therefore, the failed stand was disked down, rows were rehipped, and the field was replanted on April 8. In May, we received heavier-than-usual rainfall, which may have leached some nitrogen. We supplemented water during June and early July. Sufficient rainfall occurred the remainder of July. Overall, the corn yields were good, despite a challenging growing season.

Soil type .....	Dundee very fine sandy loam
Soil pH .....	6.5
Soil fertility .....	P=H; K=H
Fertilizer added .....	5-15-30 @ 300 lb/A on Feb. 16, 32-0-0 @ 110 lb/A on Feb. 23, and 32-0-0 @ 150 lb/A on May 15
Herbicide application .....	Bicep II Mag @ 2.1 qt/A on March 24 Preemergence — Lexar @ 3 qt/A on April 8
Irrigation .....	June 10, June 19, June 29, and July 9
Previous crop .....	Soybeans
Planting date .....	March 23 (Replanted April 8)
Harvest date .....	August 31

<sup>1</sup>Planted April 8; harvested August 31.

## TECHNICAL ADVISORY COMMITTEE

**Joe Camp**  
Agrilience

**Charlie Pilkington**  
Mississippi Corn Grower's Association

**Billy Johnson**  
Senior Research Assistant  
Coastal Plain Branch Experiment Station

**Erick Larson**  
Associate Professor  
MSU Plant and Soil Sciences

**Charlie Stokes**  
Area Agronomy Agent  
MSU Extension Service

**Glover Triplett**  
Agronomist  
MSU Plant and Soil Sciences

**Dennis Rowe**  
Statistician  
Experimental Statistics Unit  
Mississippi State University

**Paul Williams (Chair)**  
Research Geneticist  
USDA Agricultural Research Service  
Crop Science Research Laboratory
